Genus: Paphiopedilum
subgenus: Paphiopedilum
Insigne Alliance

species: henryanum

Paphiopedilum henryanum was introduced in 1987. A notable color balance of chartreuse, brown, and bright pink with contrasting dark brown spots distinctively marks the flowers. An albino form of this species exists known as *henryanum* f. *album*.

First described by Braem in *Schlechteriana* (September 3, 1987). The species is named for Henry Azadehdel who first introduced the species in Europe.

Plant description

Leaves 3 to 6 in number and 10-17 cm long, 1-2 cm wide. Notable is the dark glossy green color with a distinct yellow margin.

The inflorescence (I) being 12-25 cm high with a green to purple- brownish coloration. The plant growth is in cluster formation.

Flower Description:

Sepals—chartreuse, cordovan bold spots, broad dorsal sepal undulating margins, petals undulated, chartreuse, overlaid light purple, cordovan bold spotted, pouch chartreuse, overlaid purple, rim chartreuse, interior densely spotted light purple, staminode light chartreuse, substance firm, texture polished, pouch matte.

Habitat:

Found primarily throughout the Yunnan Province in China and Vietnam. Peak blooming time in the wild is sept. through nov. Temperature range is 12-25C and prefer light to moderate state. Growing medium consists of leaf litter/soil nutrients on limestone.
